## 1. What is SCCR?

Short-circuit current rating is the maximum RMS current that device can handle using overcurrent protection such as circuit breaker or fuse. SCCR apply or both individual and entire assembled systems.

Fuse is limiting the maximum possible peak current and reduce the total cycle of fault clearing time, by that the electrical arc time is reduced by less than 50%.

## 2. UL allowed $I_{peak}$ and $I^2t$ (Ampere Square Second) fuses

UL published the maximum allowed values for fuses at 100kA and 200kA fault current levels.

Fuse Type	Rated Current (A)	100kA		200kA	
		$I^2t \times 10^3$	$I_{peak} \times 10^3$	$I^2t \times 10^3$	$I_{peak} \times 10^3$
CLASS CC	15	2	3	3	4
	20	3	4	3	5
	30	7	7.5	7	12
CLASS T 600V	30	7	7.5	7	12
	60	30	10	30	16
	100	80	14	80	20
	200	300	20	300	30
	400	1100	30	1100	45
	600	2500	45	2500	70

## 5. Overcurrent protective devices

Circuit breakers and fuses are used to stand with overcurrent protection requirements.

Circuit breakers and fuses have the ability to interrupt short circuit current with typical ratings of kA (kilo Amperes).

## 6. Conduit kits

The UMI-B5 series have built-in conduit kit, the kit will provide Type 1 enclosure rating on installations without enclosure.
